

A Petite Solution for Bipolar Resection

PRINCESS

Slender 7 mm resectoscope
for improved efficiency

PRINCESS

Slender 7 mm resectoscope—for improved efficiency

The Princess is a uniquely petite resectoscope, from Richard Wolf Medical Instruments, with an outer diameter of 7 mm. It is used with the 12° PANOVIEW telescope. The Princess's small dimensions allow for significantly reduced dilatation and resistance upon insertion, as well as precise dissection.

The petite dimensions of the Princess make it ideal for use in patients with

- Cervical Stenosis
- Fertility issues

Double sheath system

permits 360° rotation and ensures more freedom of movement

Classic resectoscope

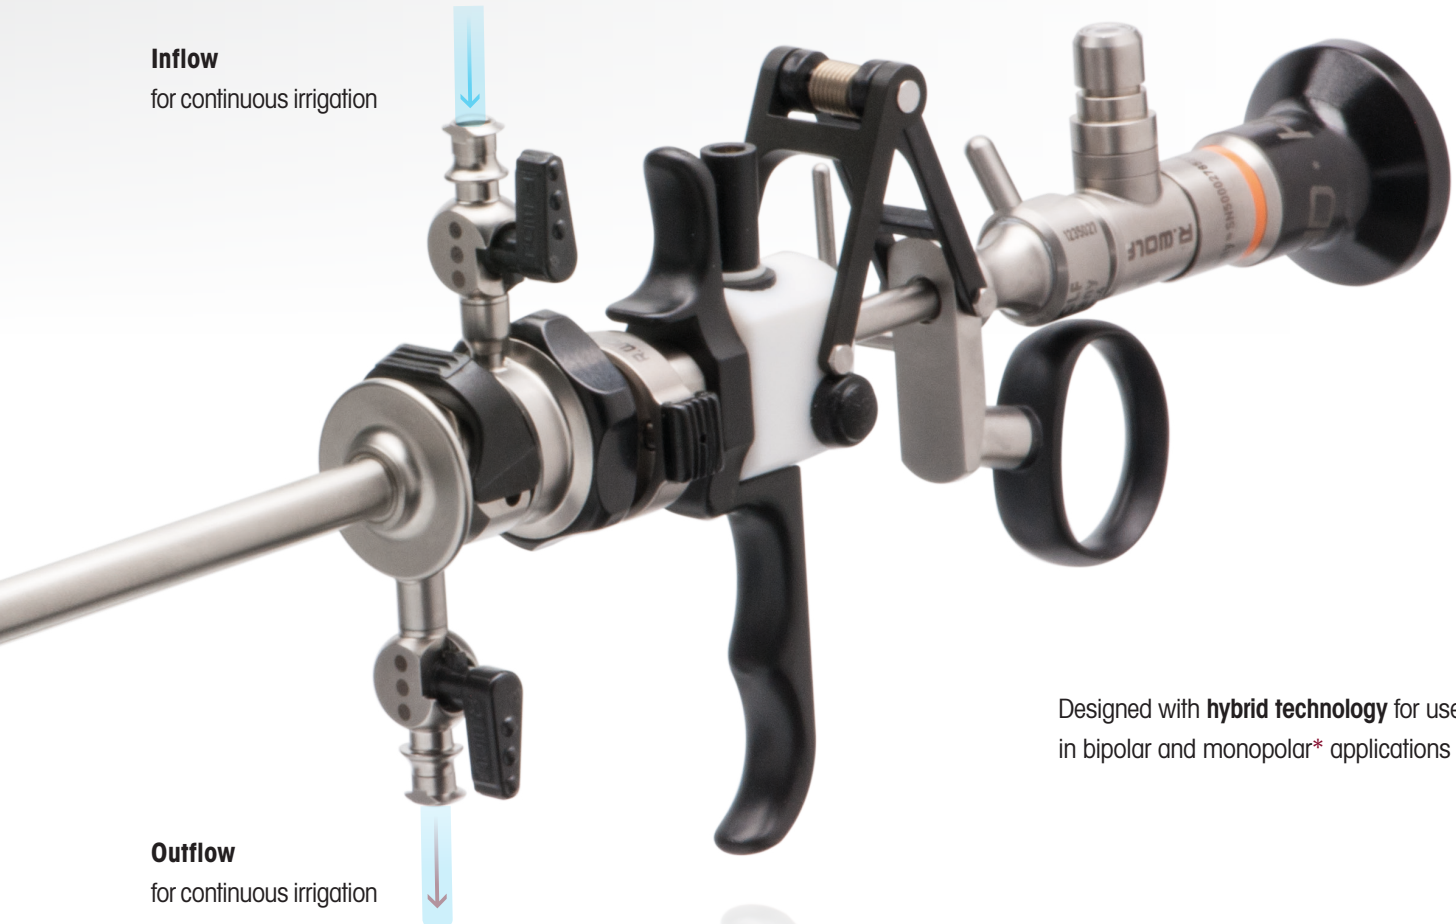

7 mm Princess Resectoscope

Slender 7 mm diameter for

- Reduced dilatation effort
- Significantly less insertion resistance
- Substantially less trauma to the cervical canal

Inflow
for continuous irrigation

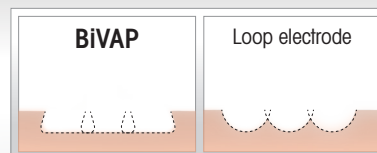

Outflow
for continuous irrigation

Designed with **hybrid technology** for use in bipolar and monopolar* applications

Bipolar vaporization electrode "BiVAP"

The new BiVAP bipolar vaporization electrode is the ideal solution for ablation of endometrial tissue and myomas.

- Optimized electrode shape
- Continuous clear field of view

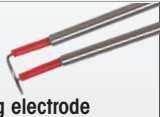

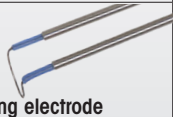

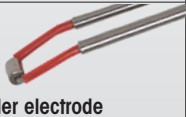

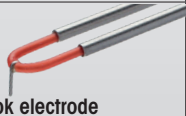

- Fast and effective tissue vaporization

*The hook electrode may be used in bipolar or monopolar applications
