

Simply smoke-free

**Sterile
Smoke-Evacuation Filter**

The simple and low cost alternative
to active smoke evacuation

Sterile Smoke-Evacuation Filter

The simple and low cost alternative
to active smoke evacuation

As an alternative to active smoke evacuation, our sterile smoke filter offers a simple, safe and efficient option for evacuating the smoke generated while using HF current during laparoscopic interventions. The smoke is polluted with harmful particles presenting a health hazard. These pollutants are removed and captured by the filter. The filtered and treated gas exhausts to the operating room and all the operating personnel are protected from potential harm.

- Combined **active charcoal and ULPA filter**
retains 99.999% of all particles, viruses and bacteria
- Ready to use immediately, **sterile disposable**
- **Easy connection** to the trocar with 3 mm luer-lock
- Significantly **reduced odor nuisance**
- **Improved visual conditions** in the abdomen
- **Protection for the entire operating team**
against fine particles, viruses and bacteria present in the smoke
